
Macro Recording and Text for Auto Script Environments Compile macros for AutoScript Environments With the AutoPythonLauncher command recorder, you can record the keystrokes you make on your keyboard, mouse and a program to a text file. To set the configuration of the command recorder, you must first enter the command recorder. Select the mode from the configuration menu of the command recorder. Start to record the keystrokes you make on your keyboard, mouse, or program by pressing a key on the keyboard. You can choose the configurable macro record option to record the keystrokes from an external program. In addition to recording the keystrokes, the command recorder can send the text you enter on the keyboard, mouse, or program to a text file. KEYMA-Launcher Description: Launch programs using Auto Scripts Turn any program into a AutoScript Launcher With the AutoPythonLauncher launcher, you can launch any program you want with a keyboard shortcut or a text command. Choose an AutoScript Launcher in the Menu bar. Press a key on the keyboard to launch a program. Optionally, type a text command on the keyboard to launch a program.

KEYMACRO Description: Macro Recording and Text for Auto Script Environments Compile macros for AutoScript Environments With the AutoPythonLauncher command recorder, you can record the keystrokes you make on your keyboard, mouse and a program to a text file. To set the configuration of the command recorder, you must first enter the command recorder. Select the mode from the configuration menu of the command recorder. Start to record the keystrokes you make on your keyboard, mouse, or program by pressing a key on the keyboard. You can choose the configurable macro record option to record the keystrokes from an external program. In addition to recording the keystrokes, the command recorder can send the text you enter on the keyboard, mouse, or program to a text file. If the image button named "Rec" has been clicked, the button that previously showed the list of the AutoPythonLauncher menus now shows a menu of the chosen launcher, with the possibility of changing the attributes of the launcher (example: showing the list of all the programs in the same folder) and selecting another launcher. You can also set the launcher's shortcut to launch a program with a specific command line.

Keymacro allows you to record your keyboard keystrokes and do something with them. With this application you can record an unlimited number of keyboard keys and macros. You can easily change the keylogs, date, time, email, target program, the working directory, save the log to a text file or a file on your computer, stop or resume the logging. You can assign a special keyboard shortcut to start the logging, stop or resume. You can choose the duration of the logging, set it to automatically start up when you start the computer or to start at a specific time. The macro can be executed when the user double clicks the desired application or when you use a keyboard shortcut, when you hold a key for a specific period of time or when you press a specific key combination. You can also set a time interval (in seconds) before or after the macro will be executed. The macro will be executed in the background when the computer is shut down, and the logs can be read with this application in a few moments. The logs are saved in files or in a text window on the screen. You can choose to save them as a text file, a file on your computer, or a file in the clipboard. You can also choose to start the logging and automatically stop the logging at a specific time. You can choose to play the log files by using Winamp, Media Player, Windows Media Player or VLC. macro-save Description: macro-save allows you to save the key combinations you've created with Keymacro to your computer. With this application you can easily create and save key combinations to the key combination database. You can create a macro with one of the following methods: Right click on the desired application, and then select Create Shortcut, or Click the macro icon at the top of the Keymacro main window and select Create Shortcut. To save a Macro, right click on the desired application and select Save Key. keyboard-macro Description: keyboard-macro allows you to record your keyboard keystrokes and do something with them. With this application you can record an unlimited number of keyboard keys and macros. You can easily change the keylogs, date, time, email, target program, the working directory, save the log to a text file or a file on your computer, stop or resume the logging. You can assign a special keyboard shortcut to start the logging,
