better A cool tool that
allows you to create your

own QR codes Even though you can create QR codes with the help of some other tools, they do not allow you to add text, especially in the form of a link. A good alternative is software utility that has the very same capabilities as the former. This software is QRCode Maker and it is, in fact, a set of tools that can not only help you create such

codes, but they can also act as a link between websites. However, it should be noted that the visual appeal of the advertisement is not at its best and it would be fair to say that the service lacks an actual place in the market. Nevertheless, if you are looking for a rather simple way of creating and embedding such codes, it can surely

satisfy the need for such functionality. How to generate a QR code? The app consists of multiple tools: the most notable one being a bar with a selection of images that can be added to the QR code. You need to enter a name and URL and then you need to press the “Create” button. The program will take care of the rest. Having finished

with the process, you can either test your QR code to see if it has been successful, or you can make some tweaks of the code. As stated, the latter is something that is possible with the help of the “Tools” menu. There you can make changes to the font, as well as the spacing between the lines of the code. Finally, you can either download your

QR code, or you can send it to the “saved QR codes” tool to get it uploaded to a website. Handy QR code generator to do it yourself QRCode Maker is a straightforward tool with a limited set of functionality. Still, its tool is something that will certainly be worth using for the sole purpose of creating a QR code for your website. Overall, the

program is very easy to use and it does its job in a jiffy. Still, a lack of support of additional code formatting features and the nature of the free version – the latter requiring some basic tweaks – render the utility only somewhat useful. As a matter of fact

If you would like to be able to use the features of this browser

when using other browsers, you should download MikyTiger Web Browser and install it on your Android device. The MikyTiger Web Browser is a bit of a curious browser. It is primarily designed to work with websites and offers some general-purpose features. It's not really a replacement for a native web browser like Chrome,

and it doesn't really contain a ton of useful features. If you're looking for a browser designed to browse the web, you'll probably be better off using Chrome or Firefox. However, if you're looking to save on bandwidth when browsing the web, or are trying to utilize some features of the browser more effectively, you might find MikyTiger
