Run the deactivated program by double clicking on the exe file. Use the Autocad CD Key. Copy the Autocad generated key. Paste it in the box above. Done. A: If you are sure that you are using a valid license, you have to make sure that your Autodesk.lic license file is correct. The key for Autodesk.lic file is the file name you used when you purchased the software. Open up your Autodesk license file folder. Check if the license file name is correct (the same as your software name). If it is correct, the CD Key is stored inside Autodesk.lic file. If your Autodesk.lic is not the same as your software name, look for the

correct name. How to get the CD key of a valid license for Autodesk software? Double click the file Autodesk.lic or Autodesk.lic.key (depending on the format you downloaded the Autodesk license file). You should see the software name and serial number on the license file. Copy the CD key from the license file. This key is used to activate your Autodesk software. Please note that, Autodesk.lic or Autodesk.lic.key is only valid if the license file is signed. You can look for the signature at the bottom of the license file. If you don't see a signature, then the license file is not signed. Please check with your Autodesk software provider if the license file is signed. If you don't

see a valid signature at the bottom of the license file, please contact the Autodesk technical support to get the CD Key. Q: How to check if a field is present in the database?
