Current Trainers: Omerta City of Gangsters The Japanese Incentive V1.6 Trainer. The intracellular communication of plant cells is achieved by means of a network of plasmalemma-bound channels that mediate the passage of ions, nutrients, and other small molecules (e.g., Ca<sup>2+</sup>, inositol 1,4,5-trisphosphate) and is the primary means of maintaining the homeostatic environment of the cell. The architecture of the plasmalemma-bound channels is one of the least understood aspects of plant cell function and is thought to be a critical determinant of the ability of a plant to respond to environmental stresses. In *A. thaliana*, the genome has been sequenced and annotated and the molecular and physiological characteristics of over 4,000 genes and gene families are known (1).
